Balanced Strategy Portfolio USD Fund

Managed by
Bank SYZ Ltd

Share class : RUSD

ISIN : LU1909134063

For qualified and retail investors

Investment objective

The Sub-fund aims to provide long-term capital growth by investing in a wide range of asset classes and by offering a balanced exposure to equity and fixed income markets. The Sub-fund may invest, mainly through funds and worldwide, in equities, fixed-income instruments (such as bonds, notes and convertibles, including, on an ancillary basis, high yield, subordinated and inflation-linked bonds), as well as, to a lesser extent, in instruments offering exposure to commodities.

Risk/Return profile

LOWER RISK
(Typically lower rewards)

HIGHER RISK
(Typically higher rewards)

1	2	3	4	5	6	7
---	---	---	---	---	---	---

The SRI (Synthetic Risk Indicator) is the indicator from the ESMA that replaced the SRRI on 1st January 2023. The SRI is calculated as the combination of MRM (Market Risk Measure) and CRM (Credit Risk Measure). Considering that the CRM scores the issuer default risk, which is extremely unlikely on a UCITS Product, the MRM will be the main trigger of the SRI score. The MRM (so the SRI) is a representation of the Market risk of the share class based on historical data (measured or proxied to a similar market risk) over the recommended holding period, unless stated otherwise.

The SRI will have a value from 1 (less volatile) to 7 (highly volatile).

Share class : R USD

Manager Comment

Highlights

- June's geopolitical developments further contributed to an already tumultuous quarter Global equities performed strongly, driven by robust gains in Emerging Markets and the U.S. U.S. Treasury yields declined in June, supporting fixed income performance

Market Review

June remained volatile, adding to a turbulent quarter. The month's key event was Israel's strike on Iran's nuclear facilities, though a ceasefire followed 10 days later. Despite geopolitical tensions, resilient economic data and softer U.S. CPI figures supported markets and boosted Fed rate cut expectations. Global equities rose, led by U.S. technology, emerging markets, and Japan, while Europe declined, dragged down by Swiss stocks. U.S. Treasuries gained as yields fell. Credit spreads tightened across IG and HY. Gold dipped light, and most major currencies strengthened against the U.S. dollar, except the yen.

Fund Review

Best performance was the equity allocation, with U.S. and Emerging Market equities making the strongest contributions. In contrast, European equities had a slightly negative impact. Fixed income also contributed positively to returns. The fund's credit allocation was particularly beneficial, as declining interest rates and tightening credit spreads created a favourable backdrop. Diversification strategies delivered a broadly neutral contribution during the month. Within the equity allocation, the manager made slight adjustments, reducing exposure to U.S. equities, by decreasing the Xtrackers S&P 500 Equal Weight UCITS ETF.

Outlook

Fundamental supports for equities remain solid (earnings growth prospects, global economic growth, valuations in non-US markets, liquidity), though market volatility is expected to persist. In the meantime, the fixed income market continues to offer an interesting setup that allows to benefit from yield carry without taking undue risks in terms of interest rate volatility and credit quality. Until visibility improves on inflation dynamics, growth trajectories, and fiscal policy, patience and selectivity remain essential, until tactical opportunities arise for extending bond maturities and duration exposure. For now, we maintain a constructive stance across equities and fixed income, without strong directional bias in order to navigate the expected summer volatility.

Portfolio composition

- i. Tactical equity adjustments:
1. Increase of the US equity allocation end of April. Then, mid of June, take profit on the US equity allocation after a strong performance, led by the IT sector.

Adherence to investment policy objectives

The above fund adhered to its investment policy objectives.

Important information

Disclaimer:

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by CACEIS Bank, Luxembourg Branch no later than 6pm (Luxembourg time) the day before (D-1) the Transaction Date (D), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time CACEIS Bank, Luxembourg Branch shall not be obliged to transact at the net asset value price as agreed to. Funds are priced every banking day following a Transaction Date (D+1) at 3pm (Luxembourg time).

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

For any additional information such as fund prices, brochures and application forms please go to www.imgp.com.

Glossary Summary:

Annualised performance: Annualised performance shows longer term performance rescaled to a 1-year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest return: The highest and lowest returns for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

Alpha: Denoted the outperformance of the fund over the benchmark.

Sharpe Ratio: The Sharpe ratio is used to indicate the excess return the portfolio delivers over the risk free rate per unit of risk adopted by the fund.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

Max Gain: Largest increase in any single month

% Positive Month: The percentage of months since inception where the Fund has delivered positive return.

Average Duration: The weighted average duration of all the underlying interest bearing instruments in the Fund.

Average Credit quality: The weighted average credit quality of all the underlying interest bearing instruments in the Fund (internally calculated).

Dividend Yield: The weighted average dividend yield of all the underlying equity in the Fund. The dividend yield of each company is the dividends per share divided by the price.

PE Ratio: The weighted average price earnings ratio of all the underlying equity in the Fund. The price earnings ratio of each company is the price divided by the earnings per share.

High Water Mark: The highest level of performance achieved over a specified period.

Fund of Funds: A Fund of Funds is a portfolio that invests in portfolios of collective investment schemes, which levy their own charges, which could result in a higher fee structure for these portfolios.
